Agritourism ‘game changer’
National Children’s Center plays key role in new Wisconsin law

Gov. Scott Walker has signed into law the Ag-Tourism Limited Liability bill, which places limits on liability for persons offering agricultural tourism activities. The bill reached Walker’s desk with help from the National Children’s Center for Rural and Agricultural Health and Safety, part of the National Farm Medicine Center.

“The law is great for the agritourism industry, but we need to remember that it doesn’t provide blanket immunity,” said the Center’s Marsha Salzwedel. “Farmers still need to post signs for hazards and follow other safety best practices.”

Agritourism resources published by the National Children’s Center contain guidelines, checklists, signs, an interactive online guide and other items that will help operators be in compliance (www.safeagrortourism.com). Salzwedel is working with the Wisconsin Agricultural Tourism Association (WATA) at a statewide series of education sessions to share safety strategies with farmers.

“This law is a game changer for tourism because ag-tourism destinations now have a safety net when opening their property up to the tourist visitor,” said WATA President Steve Peterson. “It also is a key law for dairy breakfasts, county fairs, festivals and special ag-tourism events.” More details on the new law and information about acquiring signage can be found on the WATA website, www.luv-r-ag.com.

The bill appeared to get hung up during State Assembly hearings in February, said Dave Meuer, of Meuer Farm in Chilton, who testified at the hearings. Meuer then pulled out guidelines and checklists that he obtained while attending a National Children’s Center presentation, and the resources were entered into evidence. “They were impressed,” Meuer said, “and they thought all growers/producers/farmers participating in an agritourism venture should be using the Children’s Center checklists as a guide to inspect their farms.”
Dairy worker safety trainer joins NFMC

Yurany Ninco Sanchez, the Farm Center’s new bilingual community outreach trainer, is busy conducting free health and safety training for Hispanic dairy workers on Wisconsin farms. Ninco Sanchez came to the Farm Center from Family Health/La Clinica in Wautoma, Wis., where she worked as an outreach coordinator and nurse with migrant farm workers and their families. Ninco Sanchez holds a bachelor’s degree in health care administration from the University of Wisconsin Stevens Point. She also has a bachelor’s in nursing from the University of Antioquia, Medellin, in her native Colombia.

Ninco Sanchez is delivering training approved by the Occupational Safety and Health Administration (OSHA) and endorsed by the University of Wisconsin River Falls and the Mexican Consulate in St. Paul, Minn. “Our Hispanic workforce is growing in dairy and in agriculture overall,” said NFMC Director Matthew Keifer, M.D. “Yurany is helping the Farm Center reach that important community.”

The trainings are offered free to farms that qualify for a National Institute for Occupational Safety and Health (NIOSH)-funded study being conducted by the Upper Midwest Agriculture Safety and Health Center. Trainings are delivered on-the-farm with flexible scheduling. For complete information, go to, www.marshfieldclinic.org/nfmc/sequidad.

Summer student

Jessica Perkins, a recent graduate of University at Buffalo, State University of New York, is interning with the Farm Center. Perkins is one of 10 students selected to participate in the Marshfield Clinic Research Foundation’s Summer Student Research Internship Program (SSRIP). Perkins recently completed her master of public health degree after earning a bachelor’s in animal science from Cornell University. Perkins grew up on a dairy farm in New York. Her interests focus on combining human health, behavior choices, and safety with her agricultural background and knowledge. She is primarily assisting Dr. Casper Bendixsen in research that will describe the relationship between central Wisconsin bankers and dairy farmers’ day-to-day decision-making and behaviors. Results will help in designing safety interventions that leverage that relationship.

Outreach

Get the facts about Lyme disease and other tick-borne illnesses with a handy new set of printed resources. Tammy Ellis, NFMC, worked with Anna Schotthoefer, Ph.D., to produce Tick ID cards and a field guide that includes information specific to pregnant women, farmers, hunters, fishermen, outdoor workers and parents. Wisconsin has one of the highest incidence rates of Lyme disease in the country. Check out the following new resources online at www.marshfieldclinic.org/nfmc/lymedisease. To obtain hard copies, call 1-800-662-6900 or email nfmcsh@mcrf.mfldclin.edu.

Journal of Agromedicine

The Farm Center is celebrating 10 years of editing the peer-reviewed Journal of Agromedicine, the only research journal examining all aspects of human health and safety in agriculture. The quarterly journal publishes articles of particular interest to rural health care providers and agricultural safety specialists.

Dr. Keifer is editor-in-chief, preceded in that position by Dr. Steve Kirkhorn. Other members of the editorial team include Dr. Barbara Lee, Dr. Joseph Mazza, Scott Heiberger and Kathie Smith.

ROPS rebates

McMillan-Warner Mutual Insurance Company policyholders are now eligible for up to 100 percent reimbursement on the cost of retrofitting their tractors with rollover protective structures (ROPS), thanks to a new partnership with the NFMC Wisconsin ROPS Rebate Program. The program is open to any Wisconsin tractor owner, regardless if they are a McMillan-Warner policyholder, and reimburses owners up to 70 percent (maximum of $865) toward the total cost of purchasing, shipping and installing individual ROPS. The newly formed partnership gives McMillan-Warner policyholders an added benefit of receiving the remaining 30 percent of the retrofit cost (maximum of $350). Tractor owners can apply for the program via the ROPS hotline, 1-877-767-7748 (1-877-ROPSR4U), or the website, www.ropsr4u.com.
